## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments, see paper No. 5, with respect to the rejection(s) of claim(s) 1-9 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Bradshaw, Jr. (U.S. Patent No. 6,608,820).

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Bradshaw, Jr. (U.S. Patent No. 6,608,820).

Regarding claims 1, 3-5, 8, Davison et al. disclose a method and apparatus for controlling multi-party conference calls includes circuitry which is operable according to a new conference call protocol. Figure 1 shows a system diagram of a wireless communication network illustrating one aspect of the present invention. A controlling party (Cg Pty) is in communication with a first subject party (CP1), a second subject party (CP2) and a third subject party (CP3). The controlling party is communicating through mobile station 102 while the first, the second and the

third subject parties are communicating through mobile stations 104, 106 and 108, respectively. The controlling party and the three subject parties are in a four-way conference call. As seen in FIG. 1, a plurality of virtual communication paths 1, 2, 3, 4, 5 and 6 illustrates that each mobile station is in communication with the other mobile station in a conference call [col. 3, lines 49-62].

Regarding claims 2, 6-7, 9, Davison et al. disclose that a method and an apparatus are provided that allows a controlling party to add an unlimited number of subject parties, that allows the controlling party to selectively enter into a private conversation with anyone of the subject parties regardless of the call placement order [col. 3, lines 43-47].
